Project\_Plan0

The goal of my project is to create a Katamari like game in which the player rolls around collecting objects. Once the player has collided with an object, said object becomes attached to the player increasing its size.

Goals:

- Implement a larger level – done to an extent

- Add a variety of objects that can all be added to the player (provided said object is smaller than the player and said object isn't a part of the game world) – done to an extent

- Add a win condition – done to an extent

- Add more "Stuck" fixes – done

- Add HUD – done

- Add Instructions – done
